FIBERCOPI: WORK CONTINUES ON THE NEW FIBRE NETWORK IN CITTÀ DI CASTELLO

Città di Castello (Perugia), 04 September 2025 – FiberCop, the company that manages Italy's most extensive and far-reaching digital infrastructure, is continuing to strengthen the fibre optic internet network in the area of Città di Castello. Works to build the new ultra-broadband network have already reached several areas of the municipality, with the aim of progressively making ultra-fast connections available. The project will bring fibre directly into homes.

The digital infrastructure put in place by FiberCop in Città di Castello can reach speeds of up to 10 Gigabits per second and will accelerate the digitalisation of households, businesses and public administration, enabling innovative services such as 4K streaming, remote work, telemedicine and digital services including traffic management, street lighting and environmental monitoring. In addition, fibre will help the environment by reducing CO2 emissions.

Residents can check service availability with their chosen telecoms operator and request activation to benefit immediately from the performance of the new network.

*"FiberCop continues to invest in the country's digital transformation, promoting the adoption of fibre and facilitating access to advanced services across its territory", said **Gianni Crocetti, FiberCop's Head of Operations for Northeastern Italy.** "The availability of infrastructure that can handle ever-growing traffic volumes over stable, high-speed connections will support businesses in developing their activities and improve quality of life for citizens, contributing to the growth of the local economy."*

Planned works

The works have already covered most of the town centre and during 2026 they will extend to the remaining outlying districts.

Wherever possible, existing infrastructure will be used for fibre installation, including public lighting ducts. Where excavations are required, innovative, low-impact techniques will be adopted. FiberCop will work to minimise the impact on traffic and proceed swiftly with delivery of the new network.
